Agricultural accounting software is an accounting information tool designed specifically for agricultural enterprises or agricultural production and management activities. Agricultural accounting software can calculate the various costs in the agricultural production process in detail. For example, in the planting industry, it can record the cost of materials such as seeds, fertilizers, pesticides, and irrigation water, and can also calculate costs such as land leasing and depreciation of agricultural machinery and equipment; in animal husbandry, it can count feed, veterinary drugs, depreciation of breeding facilities, and labor costs. The software helps users determine the production cost of agricultural products through accurate cost accounting functions, providing a basis for pricing and profit analysis. Due to the seasonal, cyclical and diverse characteristics of agricultural production, the software provides a variety of cost allocation methods.
