Abstracts

According to our (Global Info Research) latest study, the global AGV Car Parking Robot market size was valued at USD 41 million in 2023 and is forecast to a readjusted size of USD 84 million by 2030 with a CAGR of 10.9% during review period.

AGV robot (Automated Guided Vehicle) is a machine device that performs work automatically. It can accept human command, run pre-programmed programs, and act according to principles formulated with artificial intelligence technology. Its mission is to assist or replace human work in jobs such as manufacturing, construction, or hazardous jobs.

The introduction of the AGV used in logistics into the mechanical garage industry has resulted in the parking AGV (parking intelligent robot). The traditional mechanical garage vehicle handling device must be installed with a running track, and run along the track to a designated position to carry the vehicle. The AGV can walk freely on the ground, know its location in real time through the laser navigation sensor, and select the optimal route to transport the vehicle through path calculation. On the same area, the number of parking spaces can be increased by 1.5 times, and the efficiency of car storage and retrieval can be increased by 50%, which greatly improves the performance of the warehouse-style garage.

AGV parking robot is a market branch of AGV robot, and the market is still in the initial stage of development. The core principle of the AGV parking robot is to use the robot automatic handling technology to transport the vehicle to the dynamically allocated parking space with the help of the AGV parking robot.

From the perspective of products, AGV robot parking mainly has two types of core technologies. The first type is from the perspective of guidance. At present, there are a variety of mainstream guidance technologies, including tape navigation, laser navigation, and visual navigation. Another type of core technology is the vehicle exchange technology in robot parking. In terms of exchange, there are currently three major technologies: vehicle plate exchange, comb exchange, and mechanical arms.

Global 5 largest manufacturers of AGV Car Parking Robot are Shenzhen Yee Fung, Hangzhou Xizi, Yunnan KSEC, Hikrobot and Park Plus, which make up about 52%. Among them, Shenzhen Yee Fung is the leader with about 18% market share.

China is the largest market, with a share about 64%, followed by North America and Europe, both with the share about 13%. In terms of product type, Comb Type occupy the largest share of the total market, about 47%. And in terms of product application, the largest application is Underground Parking, followed by Ground Parking.
