Abstracts

According to our (Global Info Research) latest study, the global AGV Parking Robot market size was valued at US\$ 463 million in 2025 and is forecast to a readjusted size of US\$ 1210 million by 2032 with a CAGR of 14.6% during review period.

AGV Parking Robot is an automated parking solution based on autonomous guided vehicle technology, designed to handle vehicle transfer, positioning, and parking space allocation within structured parking facilities through flexible robotic mobility. It integrates sensing systems, navigation algorithms, motion control, centralized parking management software, and mechanical lifting modules to enable unmanned vehicle handling and dynamic routing in complex parking environments. Compared with fixed mechanical systems, it offers higher operational flexibility and scalability, improving spatial utilization and throughput in high-density urban scenarios while reducing manual intervention. Its advantages include flexible deployment, high space utilization efficiency, reduced labor dependency, improved vehicle turnover rate, and enhanced safety through automated control systems. In 2025, the capacity utilization rate was about 70%, and the average gross margin was approximately 20%. Production in 2025 was 16071 units with an average price of 28000 USD per unit. The upstream segment includes servo motors, batteries, drive units, and controllers, with representative suppliers including Siemens, Bosch, Panasonic, Mitsubishi Electric, Inovance Technology, and CATL. The midstream segment focuses on AGV system integration, navigation and control algorithm development, robotic structure engineering, and parking management platform integration. The downstream segment is primarily concentrated in public parking facilities and commercial parking operators, with representative customers including Prologis, Simon Property Group, Brookfield Properties, and China Resources Land.
