Abstracts

The global AGV Parking market size is expected to reach $ 881 million by 2032, rising at a market growth of 11.1% CAGR during the forecast period (2026-2032).

AGV parking refers to an automated system where robotic vehicles, guided by sensors and software, autonomously transport vehicles from a drop-off area to an assigned parking space and retrieve them upon request. Its core purpose is to eliminate the need for drivers to navigate and park in garages by replacing human driving with precise machine movement. This approach maximizes spatial efficiency by allowing cars to be stored in tighter configurations, thereby increasing parking capacity within the same footprint. It also enhances operational safety by removing human error from the parking process and minimizing the risk of collisions or traffic congestion inside the facility. In 2025, global ??AGV Parking production reached approximately 4805 units with an average global market price of around k US$85 per unit.

From the perspective of enterprise revenue and profit, the core driving force for revenue growth in the AGV parking industry will shift from equipment sales to full lifecycle services. For example, based on official news from companies like Hangzhou Xizi Intelligent Parking, they are transforming from a single AGV parking equipment manufacturer into a parking asset management operator, generating a stable and continuous profit stream by providing long-term maintenance, revenue sharing, and intelligent scheduling services. This model will significantly increase the profit contribution per project. Additionally, the structural change in profit margins is reflected in the deep integration with real estate and urban infrastructure. According to annual reports from multiple companies, bidding for public parking lots led by the government, as well as livelihood projects such as hospitals and commercial complexes, has become the primary source of orders for AGV parking systems. The cooperation model has

shifted from one-time procurement to long-term ?construction plus operation? partnerships, which requires companies to possess stronger capital operation capabilities and receivables management, directly impacting their cash flow and profit margins. The industry is developing from single-point intelligence towards regionalized autonomous driving networks. Official urban planning documents from cities like Beijing and Shanghai have explicitly integrated smart parking into the V2X (Vehicle-to-Everything) and smart city management systems. This means that AGV parking systems will no longer exist in isolation within a single parking lot, but will serve as part of the city's micro-circulation transportation, seamlessly connecting with autonomous vehicles. This will force leading companies in the industry to increase R&D investment in ?vehicle-parking coordination? algorithms and cloud-based control platforms, thereby creating extremely high technical barriers and further intensifying the Matthew effect within the industry. Revenue and profits will become increasingly concentrated among leading enterprises with integrated software and hardware capabilities and urban-level operational experience.

This report studies the global AGV Parking production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for AGV Parking and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of AGV Parking that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global AGV Parking total production and demand, 2021-2032, (Units)
Global AGV Parking total production value, 2021-2032, (USD Million)
Global AGV Parking production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (Units), (based on production site)
Global AGV Parking consumption by region & country, CAGR, 2021-2032 & (Units)
U.S. VS China: AGV Parking domestic production, consumption, key domestic manufacturers and share
Global AGV Parking production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (Units)
Global AGV Parking production by Type, production, value, CAGR, 2021-2032, (USD Million) & (Units)
Global AGV Parking production by Application, production, value, CAGR, 2021-2032,

(USD Million) & (Units)

This report profiles key players in the global AGV Parking market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include LT Smarts, Stanley Robotics, Hyundai WIA, ParkPlus, Shenzhen Yee Fung Automation Technology, Hangzhou Xizi iParking, KSEC Intelligent Technology, Hangzhou Hikrobot Technology, Shenzhen Weichuang Automation Equipment, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World AGV Parking market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US$ Millions), volume (production, consumption) & (Units) and average price (k US$/Unit) by manufacturer, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.
