The global AGV Wireless Charging System market size is expected to reach \$ 284 million by 2032, rising at a market growth of 13.3% CAGR during the forecast period (2026-2032).

In 2025, global AGV Wireless Charging System production reached approximately 21.8 K units, with an average global market price of around US\$ 5125 per unit.

An Automated Guided Vehicle (AGV) Wireless Charging System refers to a technology that enables AGVs to recharge their batteries without the need for physical connectors or human intervention. This system uses electromagnetic fields to transfer energy between a charging station and the AGV, which is equipped with a compatible receiver. Wireless charging enhances the efficiency and convenience of AGVs in industrial and logistical environments by minimizing downtime, reducing wear and tear on connectors, and allowing for more flexible and uninterrupted operation. It is a key innovation in the automation and optimization of material handling processes.

The AGV (Automated Guided Vehicle) Wireless Charging System market is experiencing significant growth driven by advancements in automation and the increasing adoption of AGVs in various industries such as manufacturing, logistics, and warehousing. Major sales regions include North America, Europe, and Asia-Pacific, with Asia-Pacific showing the fastest growth due to rapid industrialization and the expansion of e-commerce. Market opportunities are abundant, fueled by the need for efficient and continuous operations in warehouses and factories, where wireless charging offers the benefit of reducing downtime compared to traditional charging methods. However, challenges persist, including the high initial investment costs and the need for standardized solutions across different AGV models. Additionally, ensuring reliable and

efficient power transfer in diverse industrial environments remains a technical hurdle that manufacturers need to address.
