Abstracts

The global AI for Digital Transformation market size is expected to reach $ 38458 million by 2032, rising at a market growth of 29.3% CAGR during the forecast period (2026-2032).

AI for Digital Transformation refers to the integration of artificial intelligence technologies—such as machine learning, natural language processing, computer vision, and generative AI—into enterprise digital transformation initiatives to redesign business processes, optimize decision-making, and enable new operating models. Beyond improving automation and efficiency, AI enables data-driven insights, predictive analytics, and intelligent workflows, helping organizations transform customer experiences, supply chains, product development, and internal operations, ultimately shifting from digitalization to intelligent enterprise systems.

AI for Digital Transformation is becoming a central driver of enterprise digital transformation, shifting organizations from basic system digitization toward intelligent, data-driven operations. The market is currently in an accelerated adoption phase, where companies are increasingly leveraging AI to automate workflows, enhance decision-making, and improve customer experiences rather than focusing solely on IT system deployment.

From an industry perspective, the ecosystem is driven by cloud providers, enterprise software vendors, and AI platform companies. In the short term, AI capabilities are primarily embedded within existing enterprise systems such as ERP, CRM, and data platforms. In the long term, AI is expected to fundamentally reshape core business processes and enable intelligent, algorithm-driven decision-making across organizations. However, challenges remain, including data silos, integration complexity,

talent shortages, and uncertainties in return on investment. Overall, AI for digital transformation is widely regarded as a critical enabler of long-term enterprise competitiveness.

Report Scope

This report studies the global AI for Digital Transformation demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for AI for Digital Transformation, and provides market size (US$ million) and Year-over-Year (YoY) growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of AI for Digital Transformation that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global AI for Digital Transformation total market, 2021-2032, (USD Million)

Global AI for Digital Transformation total market by region & country, CAGR, 2021-2032, (USD Million)

U.S. VS China: AI for Digital Transformation total market, key domestic companies, and share, (USD Million)

Global AI for Digital Transformation revenue by player, revenue and market share 2021-2026, (USD Million)

Global AI for Digital Transformation total market by Type, CAGR, 2021-2032, (USD Million)

Global AI for Digital Transformation total market by Application, CAGR, 2021-2032, (USD Million)

This report profiles major players in the global AI for Digital Transformation market based on the following parameters - company overview, revenue, gross margin, product

portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Microsoft, Google, Amazon, IBM, Oracle, Huawei, Rockwell Automation, ABB, Meta, UiPath, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the world AI for Digital Transformation market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US$ Millions), by player, by regions, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.
