According to our (Global Info Research) latest study, the global AI Agent Builders Software market size was valued at US\$ 788 million in 2025 and is forecast to a readjusted size of US\$ 1223 million by 2032 with a CAGR of 6.6% during review period.

AI Agent Builder is a specialized software tool for developing, building and managing artificial intelligence agents. These agents can perform automated tasks, answer user questions, perform natural language processing, interact with users, and perform specific business functions.

Agents are applications that integrate perception, decision-making, memory, and execution. Actual implementation and multi-agent collaboration will become core competitiveness. Agents are autonomous systems with full-link capabilities from environmental perception to decision-making and reasoning to action execution. Their core features include autonomy, tool invocation, memory mechanism, and goal orientation. Unlike traditional AI's passive response, agents can proactively plan execution paths, marking a paradigm shift in AI from 'information processing' to 'goal achievement.' In the future, agents' actual implementation capabilities will become core competitiveness, and multi-agent collaboration will become the mainstream development direction: (1) Actual implementation capabilities: Their core competitiveness is reflected in task decomposition and automation, dynamic adaptability, and optimized human-machine collaboration. Only by embedding them into actual business processes can the capabilities of agents be fully unleashed. The true competitiveness of AI in the future lies in whether they can be integrated into workflows like 'digital employees' and bring about actual efficiency improvements. (2) Multi-agent collaboration: From a human perspective, each person represents a specific role at

work, and future agents will also be like this. More advanced use cases usually require collaboration between multiple agents, each responsible for a specific role, forming a complex agent collaboration network similar to the human collaboration network.
