Abstracts

According to our (Global Info Research) latest study, the global AI App Builder Tools market size was valued at US\$ 4409 million in 2025 and is forecast to a readjusted size of US\$ 12911 million by 2032 with a CAGR of 16.5% during review period.

AI App Builder Tools are software platforms that enable users to design, build, and deploy applications with embedded artificial intelligence capabilities through no-code, low-code, or developer-centric approaches. These tools abstract complex AI functions—such as natural language processing, computer vision, recommendation engines, and agent orchestration—into reusable components, allowing faster application creation without deep AI expertise. They are widely used to build chatbots, workflow automation apps, AI assistants, and vertical-specific intelligent applications.

The market serves a broad user base, ranging from citizen developers and small businesses to professional developers and large enterprises. AI App Builder Tools are commonly applied in customer service, marketing automation, internal productivity tools, data analysis, and industry-specific solutions in finance, healthcare, retail, and manufacturing. Compared with traditional low-code platforms, AI app builders emphasize real-time model interaction, orchestration, and continuous learning.

The cost structure is dominated by software R&D, cloud computing resources, and ongoing AI model inference or API usage fees. While variable compute costs are higher than in traditional development tools, AI app builders benefit from subscription-based pricing, usage-based billing, and strong platform stickiness. As a result, leading vendors typically achieve high gross margins, often in the range of 65% to 85%, depending on scale, pricing models, and infrastructure efficiency.
