According to our (Global Info Research) latest study, the global AI Aquaculture Platform market size was valued at US\$ 352 million in 2025 and is forecast to a readjusted size of US\$ 545 million by 2032 with a CAGR of 6.4% during review period.

The AI ??Aquaculture Platform is a software platform that integrates artificial intelligence (AI), the Internet of Things (IoT), machine vision, big data analytics, cloud computing, and automated control technologies to provide intelligent management and decision support for the entire aquaculture process. This platform collects real-time data on water temperature, dissolved oxygen, pH, salinity, ammonia nitrogen, biomass, feeding behavior, and equipment operating status. Using machine learning and predictive models, it analyzes and optimizes the aquaculture environment, fish and shrimp growth, disease risk, and production efficiency, enabling functions such as intelligent feeding, water quality control, disease early warning, growth prediction, yield assessment, and operational management. The platform can be widely applied to pond aquaculture, marine cage aquaculture, recirculating aquaculture systems (RAS), shrimp farming, and deep-sea smart aquaculture farms, helping aquaculture enterprises improve survival rates, reduce feed costs, decrease labor input, and enhance resource utilization efficiency. With the development of smart fisheries and digital agriculture, AI-powered aquaculture platforms are becoming a crucial technological foundation for driving the aquaculture industry towards precision, automation, and sustainability.

The AI ??Aquaculture Platform market is in a phase of rapid development, driven by increasing global demand for aquatic products, the upgrading of intensive aquaculture, rising labor costs, and sustainable fisheries policies, maintaining high growth momentum. Regionally, Europe, with its mature marine aquaculture industry and high

level of digitalization, leads in areas such as machine vision, biomass analysis, and intelligent feeding. North America focuses on developing AI algorithms, data analysis, and intelligent management systems for recirculating aquaculture systems (RAS). The Asia-Pacific region, relying on its large-scale aquaculture operations and government support for digital agriculture policies, is the fastest-growing region. The current market has formed an application system centered on intelligent feeding, water quality monitoring, disease early warning, growth prediction, digital twins, and aquaculture operation management, and is gradually evolving towards cloud platforms, edge computing, and multi-farm collaborative management. In the future, the industry will accelerate the integration of artificial intelligence, the Internet of Things, automated equipment, and remote sensing monitoring technologies to achieve higher levels of precision aquaculture and unmanned operation. Major obstacles include high initial investment costs, inconsistent data collection standards, limited model generalization capabilities due to complex aquaculture environments, insufficient network communication infrastructure, and low acceptance of digitalization among small and medium-sized aquaculture farmers. The industry average gross profit margin generally remains between 40% and 65%.
