According to our (Global Info Research) latest study, the global AI-based Antibody Development Platform market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A critical aspect of a successful pandemic response is expedient antibody discovery, manufacturing and deployment of effective lifesaving treatments to patients around the world. However, typical drug discovery and development is a lengthy multi-step process that must align drug efficacy with multiple developability criteria and can take years to complete. In this context, artificial intelligence (AI), and especially machine learning (ML), have great potential to accelerate and improve the optimization of therapeutics, increasing their activity and safety as well as decreasing their development time and manufacturing costs. Artificial intelligence stands at the forefront of transforming antibody development. AI and machine learning (ML) algorithms can analyze vast datasets, uncover patterns, and predict outcomes with a speed and accuracy unattainable by human researchers.
