According to our (Global Info Research) latest study, the global AI-Based Surveillance Systems market size was valued at US\$ 30903 million in 2025 and is forecast to a readjusted size of US\$ 106308 million by 2032 with a CAGR of 19.2% during review period.

An AI-based surveillance system is a security solution that combines traditional video or sensor monitoring with artificial intelligence (AI) algorithms to automatically detect, analyze, and respond to events in real time. Unlike conventional surveillance, which relies on human operators to monitor feeds, AI-based systems can process data, recognize patterns, and trigger alerts automatically. The AI-based surveillance industry chain includes sensor and AI chip suppliers upstream, camera and system integrators midstream, and distributors and end users downstream across security, industrial, healthcare, and smart city applications. AI-based surveillance systems are transforming security from passive monitoring to proactive intelligence, enabling faster response, reduced human error, and predictive insights.
