According to our (Global Info Research) latest study, the global AI Computing Tokens market size was valued at US\$ 14830 million in 2025 and is forecast to a readjusted size of US\$ 182458 million by 2032 with a CAGR of 33.4% during review period.

AI computing tokens refer to the basic units used to measure and bill the computational workload generated when artificial intelligence models process data. In large language models (LLMs) and other AI systems, input text, images, audio, or code are broken down into smaller segments called tokens. Each token represents a piece of information—such as a word, part of a word, or character—that the model analyzes during training or inference. AI service providers typically charge users based on the number of tokens processed when using AI APIs or cloud AI platforms. Therefore, AI computing tokens function as a standardized unit for measuring AI model usage, computing consumption, and service pricing.
