Abstracts

The global AI Content Creation market size is expected to reach \$ 7205 million by 2032, rising at a market growth of 15.8% CAGR during the forecast period (2026-2032).

Artificial intelligence (AI) content creation refers to the process of automatically or semi-automatically creating text, images, audio, video, music, and interactive content using AI technologies, including natural language processing (NLP), generative models (such as large language models), computer vision, speech synthesis, and multimodal generation tools. Its core objectives are to improve content production efficiency, reduce the cost of manual creation, and meet the demand for high-quality, diverse content across various application scenarios such as business, media, education, advertising, and entertainment, while maintaining or enhancing creative expression.

The upstream of the AI content creation industry chain primarily includes computing power and cloud service providers, basic AI model development companies (such as large language models and generative image/audio/video models), data providers, and algorithm tool and development framework suppliers; the midstream consists of AI content creation platforms and application service providers, which integrate basic AI technologies with creation tools to provide content generation, intelligent editing, creative assistance, and multimodal generation services for businesses or individuals. This is the core value-creating segment of the industry chain, typically with high gross profit margins, generally in the 60%-85% range; the downstream comprises end-users of the content, including media organizations, advertising companies, e-commerce platforms, education and training institutions, and game and entertainment companies, who obtain AI-generated content through subscriptions, pay-per-use, or customized services, driving the continuous cycle and scale expansion of the industry chain.

China and the United States are two leaders in AI industry. On the AI 100 list (2022) released by CB Insights, the number of companies in the United States ranks first, with more than 70 companies, followed by the United Kingdom, with 8 companies on the list. China and Canada both holds 5 companies on the list. According to data from the China Academy of Information and Communications Technology, the scale of China's core artificial intelligence industry reached \$508 billion in 2022, a year-on-year increase of 18%. From 2013 to November 2022, the cumulative number of patent applications for artificial intelligence inventions in the world reached 729,000, and the cumulative number of applications in China reached 389,000, accounting for 53.4%. However, the Global Artificial Intelligence Innovation Index Report 2021 released by the China Institute of Scientific and Technological Information shows that the overall strength of the United States is still far ahead. The number of artificial intelligence companies in the United States is about 4,670, while China has only 880. China's data center is less than 1/127 of that of the United States.
