The global AI Digital Human Solution market size is expected to reach \$ 1272 million by 2032, rising at a market growth of 12.1% CAGR during the forecast period (2026-2032). In 2025, global AI Digital Human Solution approximately 103,577units, with an average global market price of around US\$ 5192 per unit. Gross margin is about 43%. A AI Digital Human Solution is an intelligent device that highly integrates a digital human image engine, voice interaction, AI inference, display terminal, and computing hardware. It enables real-time digital human display, dialogue interaction, content broadcasting, and business services, and is typically deployed as a floor-standing large screen, interactive terminal, or cabinet-style device. The upstream mainly includes AI large-scale models and digital human driving engines, speech recognition and synthesis technology, graphics rendering and chip computing power, display modules, and complete machine manufacturing. Downstream applications are widely used in government service halls, bank and telecom operator branches, retail and commercial complexes, exhibitions, cultural tourism scenarios, and enterprise services for intelligent navigation, customer service consultation, brand communication, and digital service upgrades.

1. Evolution from 'Demonstration-Oriented' to 'Service-Oriented Digital Employees': Virtual digital humans will evolve from simple announcements and visual displays to 'digital employees' with business understanding and execution capabilities. They will be able to undertake practical service functions such as consultation, processing, marketing, and training, significantly improving service efficiency and consistency.
2. Deeply Driven by Large Models, Rapidly Enhancing Intelligence: The integration of general and industry-specific large models enables digital humans to possess stronger natural language understanding, contextual memory, and complex task processing capabilities, achieving a more natural and human-like multi-turn interactive experience.
3. Hardware-Software Integration Becomes the Mainstream Delivery Form: Virtual

digital humans are accelerating their deep integration with hardware such as computing modules, cameras, microphones, and touchscreens, delivered in an 'all-in-one' form, lowering deployment barriers, shortening implementation cycles, and facilitating large-scale replication.

4. Comprehensive Enhancement of Multimodal Interaction Capabilities: Integrating multimodal interaction methods such as voice, vision, gestures, facial expressions, and touch, digital humans can adapt to complex offline environments, enhancing user immersion and realism, and meeting the high-requirement scenarios of government, finance, and retail.

5. Deepening Industry and Scenario-Based Applications: Digital humans will be deeply customized for industries such as government services, financial institutions, retail, cultural tourism and exhibitions, and medical consultations, forming standardized solutions of 'industry templates + scenario applications.'

6. Parallel Development of Cloud-Edge Collaboration and Local Deployment: In scenarios with high data security and real-time requirements, local deployment and edge computing power will become important trends, while continuously collaborating with cloud models to achieve a balance between performance and security.

7. Continuously Decreasing Content Production and Maintenance Costs: With the maturity of modeling, training, and generation tools, the costs of creating, updating, and maintaining digital humans are continuously decreasing, driving virtual digital humans from pilot applications to large-scale commercial use.
