According to our (Global Info Research) latest study, the global AI Digital Humans market size was valued at US\$ 380 million in 2025 and is forecast to a readjusted size of US\$ 722 million by 2032 with a CAGR of 10.1% during review period.

AI Digital Humans refer to virtual characters or avatars that are created using artificial intelligence (AI) technologies to simulate human-like behavior, appearance, and interaction in digital environments. These digital humans are often designed to be highly realistic, with lifelike facial expressions, gestures, and speech capabilities.

1. From Display Avatars to Digital Employees

Service virtual digital people are evolving from simple visual presenters into task-capable digital employees that can handle consultation, guidance, transactions, and after-sales support across multiple service scenarios.

2. Deep Integration with Large Language Models (LLMs)

The adoption of large language models significantly enhances contextual understanding, multi-turn dialogue, and intent recognition, enabling more natural, accurate, and human-like service interactions.

3. Soft-Hardware Integrated Deployment

Service virtual digital people are increasingly delivered via integrated terminals or all-in-one machines, combining AI software, edge computing, displays, cameras, and microphones to enable fast deployment and standardized operation.

4. Multi-Modal Interaction Capabilities

Future systems will integrate voice, vision, gesture, facial expression, and touch-based inputs, improving user engagement and making digital people adaptable to complex real-world environments.

5. Industry-Specific and Scenario-Based Customization

Virtual digital people will be increasingly tailored for specific industries such as government services, finance, healthcare, retail, and transportation, using pre-trained industry models and workflow templates.
