According to our (Global Info Research) latest study, the global AI Firewall Hardware market size was valued at US\$ 4009 million in 2024 and is forecast to a readjusted size of USD 11750 million by 2031 with a CAGR of 16.8% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

An artificial intelligence (AI) firewall, an evolution of next-generation firewalls (NGFW), employs intelligent detection technologies to enhance the detection of advanced and unknown threats. Unlike traditional NGFWs, an important tool in network security, that rely on a static rule database, AI firewalls utilize an intelligent detection engine that enables firewalls to deal with variant threats. This engine threat detection models using vast amounts of sample data, optimizes these models based on real-time traffic, and significantly improves threat detection capabilities.
