Abstracts

According to our (Global Info Research) latest study, the global AI Firewall Software market size was valued at US\$ 3614 million in 2024 and is forecast to a readjusted size of USD 7415 million by 2031 with a CAGR of 12.5% during review period.

An artificial intelligence (AI) firewall Software, an evolution of next-generation firewalls (NGFW), employs intelligent detection technologies to enhance the detection of advanced and unknown threats. Unlike traditional NGFWs, an important tool in network security, that rely on a static rule database, AI firewalls utilize an intelligent detection engine that enables firewalls to deal with variant threats. This engine threat detection models using vast amounts of sample data, optimizes these models based on real-time traffic, and significantly improves threat detection capabilities.
