According to our (Global Info Research) latest study, the global AI Gateway market size was valued at US\$ 13.7 million in 2024 and is forecast to a readjusted size of USD 170 million by 2031 with a CAGR of 44.6% during review period.

An AI Gateway is a middleware platform designed to facilitate the integration, management, and deployment of artificial intelligence (AI) models and services within an organization's IT infrastructure. It acts as a bridge between AI systems and end-user applications and provides a cohesive and scalable environment for leveraging AI capabilities. With the explosion of AI technologies being integrated into new and existing applications, AI Gateways are essential for organizations to efficiently manage the deployment and operation of AI technologies and to ensure they are integrated into the broader IT ecosystem.

The major global companies of AI Gateway include Kong Inc., IBM, Cloudflare, Databricks, Domino Data Lab, solo.io, etc. In 2024, the world's top three vendors accounted for approximately 45.63% of the revenue.

The AI Gateway serves as a critical bridge between disparate artificial intelligence models, data sources, and end-user applications. By standardizing interfaces, managing workloads, and ensuring seamless interoperability, it simplifies integration across complex AI ecosystems. In doing so, it enables organizations to harness the strengths of multiple AI models—regardless of their origin or framework—without sacrificing performance, security, or scalability.

As the demand for multimodal and hybrid AI systems grows, AI Gateways will become increasingly essential. They not only reduce the complexity of deploying AI at scale but

also foster innovation by allowing developers to experiment with diverse models and tools within a unified architecture. Ultimately, AI Gateways represent a key enabler in the future of modular, flexible, and enterprise-grade AI infrastructure.
