Abstracts

The global AI-Generated Microdramas market size is expected to reach $ 1500 million by 2032, rising at a market growth of 19.5% CAGR during the forecast period (2026-2032).

AI-Generated Microdramas refer to a novel form of digital entertainment characterized by ultra-short narrative arcs—typically ranging from 30 seconds to 2 minutes per episode—where Artificial Intelligence acts as the primary engine for content creation. This technological paradigm encompasses the use of Generative AI (GenAI) across the entire production pipeline, including automated scriptwriting (LLMs), AI-driven visual synthesis (Text-to-Video/Image-to-Video), and AI-cloned voiceovers or music composition. Unlike traditional web series, these dramas prioritize high-frequency "hook" points and vertical-screen optimization, leveraging AI to achieve mass personalization and a drastic reduction in production cycles and costs.
