Abstracts

The global AI Governance market size is expected to reach \$ 12158 million by 2032, rising at a market growth of 9.9% CAGR during the forecast period (2026-2032).

AI governance refers to the institutional, technical, and service frameworks that manage and regulate artificial intelligence systems throughout their lifecycle—from design and development to deployment and operation—covering ethics, risk control, regulatory compliance, data usage, model transparency, and accountability. Its objective is to balance innovation with safety, legality, and social responsibility, enabling trustworthy, controllable, and sustainable AI development.

From a global perspective, AI governance is rapidly transitioning from policy discussion to practical implementation, driven by tightening regulations, the rapid commercialization of generative AI, and enhanced enterprise risk management. Europe and North America focus on regulatory compliance frameworks, governance standards, and audit tools, while the Asia-Pacific region emphasizes enterprise-level implementation such as model evaluation, data governance, and internal control systems. Overall, the market is characterized by policy-driven demand, enterprise adoption, and the increasing toolization and platformization of governance solutions.
