The global AI Homework Grading Software market size is expected to reach \$ 680 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

AI-powered homework grading software is a digital teaching tool that uses artificial intelligence (especially natural language processing, machine learning, and computer vision) to automatically identify, analyze, and grade student assignments (such as multiple-choice questions, fill-in-the-blank questions, essays, and handwritten answers), providing feedback and improvement suggestions.

AI-powered homework grading software is an intelligent educational software system that uses natural language processing (NLP), optical character recognition (OCR), machine learning, and deep learning algorithms to automatically grade, score, correct, diagnose, analyze errors, and provide learning suggestions for student assignments (objective questions, subjective questions, essays, calculation problems, English listening and speaking, etc.). It can replace or assist teachers in completing repetitive grading tasks, improving grading efficiency and the timeliness of feedback.

The core functions of AI-powered homework grading software generally include: automatic grading, content analysis, personalized feedback, data statistics and reporting, etc.
