According to our (Global Info Research) latest study, the global AI Medical Imaging Software for ECG market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Electrocardiograms (ECGs) are the most common and effective tool for diagnosing arrhythmias, but the large volume of ECG data and the scarcity of trained physicians make timely and accurate interpretation challenging. In China, there are approximately 250 million ECG tests annually and 35 million dynamic ECG monitoring cases, generating vast amounts of data. The long learning curve for ECG analysis further limits the availability of skilled doctors. AI medical imaging software for ECG analysis provides a crucial solution to this problem by automating the interpretation process, assisting physicians in making faster and more accurate diagnoses, and meeting the growing demand for rapid and precise medical assessments.
