According to our (Global Info Research) latest study, the global AI Medical Solutions market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Artificial intelligence medical services are services that help humans treat diseases and improve health through the use of artificial intelligence technology.

Medicine has been determined from the beginning as one of AI's most promising fields of application. Since the mid- 20th century, researchers have proposed and developed multiple systems to aid clinical decision-making. In addition, it is tough to code higher-order interactions amongst distinct fragments of knowledge penned by various experts, and the wholeness of previous healthcare awareness confines the execution of the network. Furthermore, it has been challenging to implement a system that integrates deterministic and probabilistic reasoning to reduce the relevant clinical context, prioritize diagnostic assumptions, and recommend therapy.
