AI Museum Guides are interactive guide systems that combine artificial intelligence (AI), voice recognition, and augmented reality (AR) technologies, designed specifically for museums, art galleries, and historical sites. These systems provide personalized guided tours through smart devices such as headsets, smart glasses, or mobile applications. The system can analyze visitors' locations, interests, and questions in real time, dynamically adjusting the content of the explanations, providing multilingual support, detailed background information, historical stories, and relevant information about artworks or exhibits. Through AI technology, the guide system not only enhances visitor engagement and interactivity but also provides intelligent recommendations based on visitor behavior data, offering museums precise data analysis and marketing support. Upstream raw materials mainly include smart hardware, sensors, processing chips, displays, and audio systems, while downstream suppliers primarily serve museums, exhibition institutions, cultural heritage preservation units, and educational institutions. The future lies in the integration of augmented reality and virtual reality (VR), the application of precise positioning technology, and data mining and content optimization to provide a deeper level of immersive experience. In terms of demand and business opportunities, with the digital transformation of the global museum industry and the increasing demand for personalized services from tourists, the AI museum guide market will continue to expand, especially in Asia, Europe and North America, where it has great potential.
