## Abstracts

The global AI Network Monitoring Solution market size is expected to reach \$ 1924 million by 2032, rising at a market growth of 8.5% CAGR during the forecast period (2026-2032).

The AI Network Monitoring Solution is an intelligent system that deeply integrates AI technologies (such as machine learning and deep learning) with traditional network monitoring. Through automated data collection and intelligent analysis, it enables real-time monitoring of network traffic, device status, and user behavior. Its core lies in using AI algorithms to automatically learn network baselines, accurately identify abnormal patterns (such as potential attacks or failures), perform predictive analysis to provide early warnings of risks, and dynamically execute automated response strategies, thereby significantly improving operational efficiency. Compared to traditional monitoring that relies on static rules, this solution has stronger adaptability, a lower false alarm rate, and can cope with complex and ever-changing network environments, ultimately ensuring network stability, security, and high availability.

This report studies the global AI Network Monitoring Solution demand, key companies, and key regions.
