## Abstracts

According to our (Global Info Research) latest study, the global AI-powered ESG Intelligence Platform market size was valued at US\$ 1169 million in 2025 and is forecast to a readjusted size of US\$ 2696 million by 2032 with a CAGR of 13.9% during review period.

AI-powered ESG Intelligence Platform refers to a category of technology platforms that integrate artificial intelligence technologies—such as machine learning (ML), natural language processing (NLP), generative AI, and predictive analytics—to automate, enhance, and scale the management, analysis, and reporting of ESG data.

### Market Driver

- 1. Intensifying Regulatory Scrutiny:** Governments and regulatory bodies worldwide (e.g., the EU's CSRD, ISSB standards) are mandating stricter and more detailed ESG disclosures. Companies are turning to AI to manage this compliance burden efficiently, automate data tracking, and ensure audit readiness.
- 2. Escalating Stakeholder Demands:** Investors, customers, and employees are demanding greater transparency and verifiable proof of corporate sustainability performance. AI helps organizations move beyond surface-level claims to provide defensible, accurate, and auditable data.
- 3. Need for Data Processing Power and Efficiency:** The sheer volume and variety of ESG data make manual analysis impossible. AI's ability to process vast datasets with speed and precision, automate data collection, and reduce human error is a primary

driver for adoption.

4. Accelerated Innovation in AI: Advances in data science, including generative AI and agentic AI (autonomous task-executing agents), are unlocking new capabilities for climate risk modeling, supply chain transparency, and automated report drafting.
