An AI-powered event platform is an intelligent system that integrates artificial intelligence technologies into the entire event management lifecycle, designed to enhance the planning efficiency, participant experience, and operational effectiveness of various offline or hybrid (online-offline) events?including conferences, exhibitions, competitions, marketing campaigns, and corporate training.

The rise of AI-powered event platforms is primarily driven by enterprises' urgent need to enhance event efficiency and attendee experiences, the widespread adoption of hybrid?both online and offline?event models, participants' heightened expectations for personalization, and the growing demand for quantifiable marketing results. Concurrently, the maturation of artificial intelligence, big data analytics, and generative AI technologies provides a viable foundation for automating the entire event lifecycle. Furthermore, the post-pandemic acceleration of digital transformation within the events industry?coupled with rising labor costs and intensifying competition?has further compelled organizers to leverage AI for precision recruitment, intelligent operations, and data-driven decision-making, thereby boosting conversion rates, brand influence, and return on investment.
