According to our (Global Info Research) latest study, the global AI-Powered Retina Image Analysis market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

AI-powered retina image analysis refers to the use of artificial intelligence and machine learning algorithms to evaluate retinal images, often captured by fundus cameras or optical coherence tomography (OCT) devices. These systems are designed to automatically detect and diagnose various eye conditions such as diabetic retinopathy, age-related macular degeneration, and glaucoma by analyzing patterns, textures, and anomalies in the retina. The AI models are typically trained on vast datasets of retinal images, enabling them to achieve high accuracy and consistency in detecting early-stage diseases. This technology aids ophthalmologists by improving diagnostic efficiency, reducing human error, and allowing for faster, more accessible eye health assessments.
