According to our (Global Info Research) latest study, the global AI Short Drama market size was valued at US\$ 890 million in 2025 and is forecast to a readjusted size of US\$ 1805 million by 2032 with a CAGR of 10.7% during review period.

AI short dramas refer to short video storylines generated or created with the assistance of artificial intelligence technology. They typically range from 1 to 5 minutes in length and encompass virtual characters, automated script generation, voice-over narration, and scene rendering. Their core characteristics are high automation, low cost, rapid production, and the ability to be personalized according to user preferences. Compared to traditional short dramas, AI short dramas not only lower the creative threshold but also enable real-time iteration and optimization of content on social media and video platforms, thus meeting the demand for fragmented content consumption.

AI short dramas have broad market prospects. On the one hand, short video consumption continues to grow, especially among Generation Z and young people, who have a strong demand for short, high-frequency entertainment content. On the other hand, the technological maturity of AI-generated content (AIGC) is gradually improving, significantly reducing the threshold and cost of creating short dramas. In the future, AI short dramas can be implemented in various scenarios such as social media platforms, advertising and marketing, brand promotion, education and training, and virtual idols, achieving large-scale content creation and commercial monetization. Furthermore, with advancements in generative AI technology in natural language processing, computer vision, and speech synthesis, the story quality, character expressiveness, and immersive experience of micro-dramas will be further enhanced, thereby driving rapid industry growth.
