According to our (Global Info Research) latest study, the global AI Short Drama Technology Platform market size was valued at US\$ 539 million in 2025 and is forecast to a readjusted size of US\$ 1172 million by 2032 with a CAGR of 11.7% during review period.

An AI short drama technology platform refers to software or online platforms that provide a one-stop service for short drama creation based on artificial intelligence (AI) technology. This includes functions such as automatic script generation, character design, virtual scene construction, voice dubbing, video rendering, post-production editing, and personalized recommendations. These platforms typically integrate natural language processing, computer vision, speech synthesis, motion capture, generative AI, and content management systems, enabling content creators, businesses, or individuals to quickly generate high-quality short drama content and intelligently optimize it based on audience preferences. Their goal is to lower the creative threshold, improve production efficiency, and support commercial monetization and social media dissemination.

AI short drama technology platforms have broad market prospects. On the one hand, the consumption of short videos and micro-dramas continues to grow, especially among young users who have a strong demand for fragmented, high-frequency entertainment content. On the other hand, the maturity of generative AI technology automates and reduces the cost of processes such as script creation, character animation, and voice dubbing. In the future, these platforms will become important tools for content creation, widely used in entertainment, advertising and marketing, virtual idols, education and training, and brand storytelling. Meanwhile, with the optimization of AI algorithms and

the improvement of multimodal generation capabilities, the platform can provide a more personalized and immersive micro-drama experience, and may become the standard creative infrastructure on social media and video platforms, driving the entire short video ecosystem towards intelligence and automation.
