## Abstracts

According to our (Global Info Research) latest study, the global AI Sports Testing Station market size was valued at US\$ 178 million in 2025 and is forecast to a readjusted size of US\$ 333 million by 2032 with a CAGR of 9.3% during review period.

An AI Sports Testing Station is an integrated self-service physical fitness testing terminal equipped with AI human skeleton posture recognition, high-precision motion sensors, intelligent touch interaction, and cloud-based data management. It can automatically complete motion capture, score measurement, violation judgment, and assessment report generation for various fitness tests such as sit-and-reach, standing long jump, rope skipping, and running. It replaces manual operation to realize standardized, digital, and unmanned testing throughout the process, efficiently meeting the needs of automated physical fitness monitoring in campus physical health assessments, community fitness tests, gym evaluations, and other scenarios.

In 2025, global AI Sports Testing Station production reached approximately 41,190 units, with an average global market price of around US\$ 4,200 per unit. The production capacity of AI Sports Testing Station is approximately 52 K units per year, the average gross profit margin was 28-31%.

The upstream supply chain consists of suppliers and technical service providers for core components including AI vision chips, motion sensors, touch screens, metal and plastic structural parts, embedded motherboards, AI algorithm models, and power cables. The midstream involves complete machine integrators responsible for hardware assembly, algorithm integration, system debugging, and quality inspection. The downstream covers end users through educational equipment distributors, sports equipment agents,

and government-enterprise procurement channels, supported by after-sales technical services such as equipment maintenance, software upgrades, and data platform docking, serving schools, communities, fitness venues, and other users.

The cost structure of an AI Sports Testing Station is dominated by hardware materials, accounting for 55%-70% of total costs, including AI cameras, main control chips, professional sensors, and body structural parts. Expenses for AI algorithm development and software licensing account for 8%-15%. Production, assembly, quality control, and packaging costs make up approximately 10%-15%. Indirect costs such as R&D iteration, marketing, logistics, and after-sales operation and maintenance represent 7%-12%. Fully functional multi-test models have a 15%-30% higher total cost than basic versions due to improved hardware configuration and greater algorithm complexity.
