AI subtitle generators are software tools developed based on Automatic Speech Recognition (ASR) and Natural Language Processing (NLP) technologies. They can process audio and video content into text and automatically generate synchronized subtitles. These products typically integrate a speech recognition engine, timeline alignment algorithms, and multilingual translation modules, enabling real-time subtitle generation, offline batch processing, and multilingual output. They also support interface integration with video editing software and live streaming platforms. Their core functions include high-accuracy recognition, intelligent sentence segmentation, automatic punctuation, and subtitle style editing. They are widely used in film and television post-production, online education, live e-commerce, meeting minutes, and social media content creation. By improving content production efficiency, reducing manual transcription costs, and enhancing content accessibility, AI subtitle generators have become an important intelligent tool in the digital content industry.
