According to our (Global Info Research) latest study, the global AI Token market size was valued at US\$ 14830 million in 2025 and is forecast to a readjusted size of US\$ 182458 million by 2032 with a CAGR of 33.4% during review period.

An AI Token is a unit of text used by artificial intelligence models to process and generate language. When a user sends input to an AI model and receives a response, the text is broken into smaller units called tokens. These tokens represent pieces of words, characters, or symbols that the model uses for computation. AI service providers typically charge based on the number of tokens processed during model inference, including both input tokens and output tokens. Therefore, AI tokens function as a measurement unit for AI model usage and computing cost in large language model (LLM) services.
