Abstracts

The global AI Token market size is expected to reach \$ 182458 million by 2032, rising at a market growth of 33.4% CAGR during the forecast period (2026-2032).

An AI Token is a unit of text used by artificial intelligence models to process and generate language. When a user sends input to an AI model and receives a response, the text is broken into smaller units called tokens. These tokens represent pieces of words, characters, or symbols that the model uses for computation. AI service providers typically charge based on the number of tokens processed during model inference, including both input tokens and output tokens. Therefore, AI tokens function as a measurement unit for AI model usage and computing cost in large language model (LLM) services.

This report studies the global AI Token demand, key companies, and key regions.
