Abstracts

The global AI TRiSM market size is expected to reach \$ 1064 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

AI TRiSM (AI Trust, Risk and Security Management) refers to a category of comprehensive management frameworks and software solutions designed to ensure the security, reliability, transparency, and compliance of artificial intelligence systems. These tools facilitate risk identification, model governance, security protection, and compliance management by continuously monitoring AI models, training data, algorithmic behavior, application scenarios, and operational environments. AI TRiSM typically encompasses functions such as model risk management, AI security management, data governance, model transparency and explainability, bias detection, privacy protection, AI compliance management, and continuous monitoring. With the rapid adoption of generative AI, large language models (LLMs), and enterprise-grade AI applications, organizations ranging from financial institutions and healthcare providers to manufacturers, government agencies, and technology firms face emerging risks such as model hallucinations, data breaches, algorithmic bias, model attacks, and regulatory uncertainty. Consequently, AI TRiSM has become a foundational capability for deploying trustworthy AI systems.

The AI TRiSM industry is currently experiencing rapid growth, driven by the large-scale application of AI, the commercialization of generative AI, and the development of global AI regulatory frameworks. Key opportunities lie in areas such as security governance for LLMs, risk management for enterprise AI applications, AI compliance auditing, model lifecycle management, data privacy protection, and AI security operations. As enterprises deploy AI in critical scenarios including financial decision-making, medical diagnosis, industrial control, and customer service the demand for

trustworthy, secure, and controllable AI systems continues to rise. Core industry competitiveness is defined by capabilities in AI model monitoring, risk assessment algorithms, data governance, security protection technologies, regulatory alignment, and integration with MLOps, cloud platforms, and enterprise security systems. Platforms offering full-lifecycle model governance, real-time risk detection, and automated compliance management hold a distinct market advantage. Current industry pain points include the "black box" nature of AI models, uncontrollable generative AI outputs, poor training data quality, increased risks of model attacks, a lack of unified regulatory standards, and a shortage of in-house AI governance expertise. To address these challenges, the industry is enhancing AI trustworthiness through Explainable AI (XAI), model monitoring, automated security testing, privacy-preserving computing, AI auditing, and risk scoring mechanisms. Overall, AI TRiSM is evolving from an emerging security management discipline into a vital component of enterprise AI strategy, poised for continued rapid growth across the finance, healthcare, industrial, government, and software service sectors.
