The global AI Video Creation Platform market size is expected to reach \$ 1443 million by 2032, rising at a market growth of 11.4% CAGR during the forecast period (2026-2032).

An AI Video Creation Platform is a comprehensive online service platform integrating artificial intelligence technology, enabling fully automated or semi-automated creation from material processing to final output. Utilizing technologies such as computer vision, deep learning, and generative adversarial networks, the platform provides multimodal functions including intelligent script generation, AI digital human narration, automatic speech synthesis, intelligent video editing, image enhancement, and text-to-video conversion. Users only need to input simple text descriptions or upload basic materials, and the platform can automatically generate complete video content. Such platforms significantly reduce the technical barriers and time costs of video production, enabling individual users without professional skills to efficiently produce high-quality videos.
