## Abstracts

According to our (Global Info Research) latest study, the global AI Video Moderation market size was valued at US\$ 2583 million in 2025 and is forecast to a readjusted size of US\$ 6745 million by 2032 with a CAGR of 14.6% during review period.

AI video moderation refers to the use of artificial intelligence technology to automatically identify, analyze, and judge the compliance of video content in order to achieve efficient and large-scale content security governance.

The AI Video Moderation market is driven by the explosive growth of user-generated and live-streamed video content across social media, short-video platforms, gaming, and e-commerce, which has made manual moderation economically and operationally unsustainable. Platforms face increasing regulatory pressure and reputational risk to rapidly detect and remove harmful, illegal, or non-compliant content?such as violence, hate speech, misinformation, explicit material, and unsafe behavior?often in near real time. Advances in computer vision, multimodal AI, and large-scale deep learning have significantly improved accuracy in scene recognition, action detection, audio-visual correlation, and contextual understanding, accelerating enterprise adoption. At the same time, advertisers and brand owners demand ?brand-safe? environments, pushing platforms to invest in scalable, automated moderation solutions that reduce false positives while maintaining high throughput. The rise of live commerce, real-time streaming, and cross-border content distribution further strengthens demand, as AI video moderation enables faster response times, lower operating costs, multilingual coverage, and consistent enforcement of platform policies at global scale.
