According to our (Global Info Research) latest study, the global AI Video Upscaling Software market size was valued at US\$ 238 million in 2025 and is forecast to a readjusted size of US\$ 1860 million by 2032 with a CAGR of 34.6% during review period.

AI video upscaling software refers to a computer program or algorithm that utilizes artificial intelligence techniques, such as machine learning and deep neural networks, to enhance the resolution and quality of digital videos. This software analyzes low-resolution videos and applies advanced algorithms to increase their resolution, reduce noise, and enhance details. By leveraging AI capabilities, video upscaling software can intelligently predict missing information and generate more visually appealing and sharper videos, improving the viewing experience on high-resolution displays and devices.

With the rapid development of AI technology, various types of AI applications are booming, and AI video upscaling software is one of the typical products under this trend. This product has achieved explosive growth in the past two years.

In terms of product type, with the advancement of technology, the proportion of cloud-based AI video upscaling software will gradually increase in the future, and it is expected to reach 55.7% in 2030. At present, since on premise type AI video upscaling software is still the mainstream, it will have a revenue of US\$ 72.61 million in 2023, accounting for about 73%.

In terms of product application, most of the users of AI video upscaling software are

professional film and television producers. In 2023, the application of film and television producer accounted for 59.53%, with a revenue of US\$ 59.29 million. However, in the future, with the increase in the number of content creators and the improvement of professionalism, the scale of this application will increase from US\$ 35.24 million in 2023 to US\$ 314.75 million.

In terms of regions, North America and Europe, the main regions for AI technology innovation, still occupy an important position in the market. However, supported by the overall consumption volume, the Asia-Pacific region will grow at a CAGR of 39.9% from 2024 to 2030, reaching a consumption volume of US\$254.42 million in 2030.

In terms of enterprises, the period from 2022 to 2023 is the explosive growth period of AI video upscaling software, and many companies participated in the market, including large companies such as CapCut (ByteDance) and Wondershare. At present, most of the major players in this market are small in size, and the product is still in a period of rapid development. In the future, it is expected that larger companies will participate in this track, such as Adobe. Currently, participants in the market are mainly divided into two categories of enterprises. One category is start-up AI companies, whose products are relatively single and rely on their technological advantages to focus on the field of AI audio and video upscaling. The other category is the leading manufacturers of existing video software products. They integrate AI video upscaling software into existing software products and occupy a strong position in the market relying on their huge customer base and brand awareness.
