## Abstracts

According to our (Global Info Research) latest study, the global AI Virtual Staging Software market size was valued at US\$ 386 million in 2025 and is forecast to a readjusted size of US\$ 612 million by 2032 with a CAGR of 6.6% during review period.

AI virtual staging software uses artificial intelligence (AI) and machine learning (ML) to digitally furnish and decorate images of empty or partially furnished properties. The software analyzes room layout, dimensions, perspective, and lighting to automatically place realistic furniture and decor, remove clutter, and apply design styles across different room types, creating photorealistic staged images that help potential buyers visualize a space when furnished. These tools are primarily used by real estate agents, brokers, property sellers, developers, photographers, and marketers to simplify the staging process. They help reduce the time, cost, and logistical effort involved in traditional physical staging while improving the overall presentation and consistency of property listings. They offer practical capabilities such as multiple design styles, quick turnaround times, and the ability to refine or regenerate results, making it easier for real estate professionals and property owners to create high-quality listing images.
