According to our (Global Info Research) latest study, the global Advanced Polymer Composites market size was valued at USD 1030.4 million in 2023 and is forecast to a readjusted size of USD 1562.1 million by 2030 with a CAGR of 6.1% during review period.

Advanced polymer composites are generally characterized or determined by unusually high strength fibres with unusually high stiffness, or modulus of elasticity characteristics, compared to other materials, while bound together by weaker matrices. These are termed Advanced polymer composites in comparison to the composite materials commonly in use such as reinforced concrete, or even concrete itself. The high strength fibers are also low density while occupying a large fraction of the volume

Glass fibers are prognosticated to account as a major product segment of the world advanced polymer composites market. These fibers are excessively used in a wide range of applications such as wind turbine, aerospace, and automotive. They could also account for a larger share in the global production of advanced polymer composites.
