AIGC (Artificial Intelligence Generated Content) video creation platforms are professional software tools that utilize artificial intelligence algorithms and multimodal generation technology to automatically create or assist in editing video content. These tools provide intelligent support, covering video editing, special effects generation, script-to-video conversion, style transfer, and multitrack editing, achieving highly efficient automated production from raw materials to final output. AIGC's application in video generation is rapidly developing, with its key advantages lying in text-to-video, image-to-video, and video continuation. These capabilities enable natural language-driven scene creation, dynamic animation from static images, and seamless expansion of existing clips. AIGC, combined with intelligent editing tools, lowers the production threshold and simplifies the entire workflow from content generation to final output. The core value of AIGC video creation software lies in significantly enhancing creators' production capabilities, lowering the barrier to content creation, and expanding the expressive and innovative potential of video content.

Market Drivers:

1. Growing Market Demand

Explosive Growth in Content Creation Demand: The demand for video content from

industries such as short videos, live streaming, advertising, and film and television continues to grow. Traditional creation methods struggle to meet the high-frequency, diverse production demands. AIGC platforms can quickly generate high-quality videos, lowering the barrier to entry and improving production efficiency.

Personalized and Customized Demand: Users increasingly demand personalized video content. AIGC can generate customized videos based on user-input text, images, and other information, meeting the needs of different scenarios and audiences.

2. Cost Advantages

Reduced Creation Costs: Compared to traditional video production, AIGC platforms reduce costs associated with manpower, equipment, and facilities. For example, AI-generated virtual scenes and characters can replace real-world shooting, shortening production cycles and reducing costs.

Large-Scale Production: AIGC platforms support batch video generation, suitable for large-scale content production, such as e-commerce product displays and social media marketing, further reducing unit costs.

3. Expanding Application Scenarios

Entertainment and Social Interaction: Applications such as virtual idols, AI-generated short videos, and interactive videos enrich entertainment and social experiences, attracting a large number of users.

Education and Training: AIGC can generate vivid instructional videos, simulated scenarios, etc., enhancing educational effectiveness and learning experience.

Business Marketing: Brands can use AIGC to generate personalized advertisements, product demonstration videos, etc., improving marketing effectiveness and user conversion rates.
