Abstracts

The global Air Automotive Parking Heater market size is expected to reach \$ 4028 million by 2032, rising at a market growth of 5.9% CAGR during the forecast period (2026-2032).

An Air Automotive Parking Heater is a vehicle heating device independent of the engine system. It heats air through fuel combustion or high-pressure/low-pressure electricity and delivers the hot air directly into the vehicle cabin or cargo compartment to quickly provide heat when the vehicle is parked. Its core feature is that the heat transfer medium is air, allowing for independent heating of the passenger compartment or cargo compartment while the vehicle is parked, improving driving comfort and operational convenience in cold climates. In 2025, global production of air automotive parking heaters was approximately 22.82 million units, with an average price of approximately US\$115 per unit and a gross profit margin of approximately 30%-40%.

Air Automotive Parking Heater is currently the most popular product segment on the market, especially in cold regions such as North America, Europe, Northeast Asia, and Russia. Market drivers include the demand for passenger compartment comfort in cold climates, the dominance of diesel vehicles in the commercial vehicle market, a vibrant aftermarket, and the lightweight, low-cost, and flexible installation advantages of air heaters. Compared to coolant/water heaters, air heaters offer faster heating and can operate independently, making them a preferred choice in commercial vehicles and high-end passenger cars. While the electric heater market is expected to grow with the development of new energy vehicles, air-based diesel heaters will continue to dominate the market for gasoline-powered vehicles and high-powered vehicles.
