An air barrier system is a crucial component in building construction that prevents the uncontrolled movement of air between indoor and outdoor environments, enhancing energy efficiency, comfort, and structural integrity. Typically installed within walls, roofs, or foundations, an air barrier system consists of materials like membranes, coatings, or spray-on barriers that create a continuous seal across the building envelope. By reducing air leakage, these systems minimize heat loss in winter, heat gain in summer, and prevent moisture-laden air from entering wall cavities, which can lead to condensation and mold. Air barrier systems are essential in both residential and commercial buildings, improving HVAC efficiency, enhancing indoor air quality, and contributing to the building's overall durability and performance.
