Air Blast Seed Cleaners are agricultural machines that utilize aerodynamic principles to remove lightweight impurities (chaff, husks, dust) and separate low-density seeds from viable ones. By adjusting fan-generated airflow velocity, lighter materials are blown away while denser seeds fall into collection channels. Equipped with multi-layer vibrating screens, they achieve graded separation with capacities of 5-20 tons/hour and efficiency up to 98%. Widely used for wheat, corn, rice, and rapeseed processing, these cleaners preserve seed integrity without mechanical damage. Advanced models feature smart controls to monitor airflow and vibration, adapting to diverse seed varieties—making them essential for seed cooperatives and processing plants.
