According to our (Global Info Research) latest study, the global Air Clamp market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Air Clamps are clamps that operate using compressed air. A clamp is a device that holds an object in place by pressing down on it. It is possible to press down with more force than manual operation. Widely used in factories, it is one of the indispensable tools for processing materials such as metal products and wood.

Since they do not use electricity, they reduce the risk of fire or electric shock at the work site. However, proper maintenance is required, and regular lubrication keeps the clamps running smoothly and extends their service life. It is also important to set the air pressure appropriately, as excessive air pressure can cause damage to clamps and work pieces.
