According to our (Global Info Research) latest study, the global Air Compressor After Cooler market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The air compressor after cooler is a device used to reduce the temperature of the air compressor outlet gas. It is usually installed upstream of the air compressor outlet pipe. When high-temperature and high-pressure gas is discharged from the air compressor, it will pass through the cooling medium in the aftercooler, reducing the gas temperature to a lower level, increasing the gas density and reducing the gas humidity.

The main function of the air compressor after cooler is to lower the gas temperature, reduce gas humidity, and extend the life of the equipment. It has a wide range of applications.
