Abstracts

According to our (Global Info Research) latest study, the global Air Compressor Lubricants market size was valued at US\$ 6521 million in 2025 and is forecast to a readjusted size of US\$ 9225 million by 2032 with a CAGR of 5.2% during review period.

Air compressor lubricants are specialized oils formulated to reduce friction, dissipate heat, seal internal clearances, and prevent wear and corrosion in air compressor systems, including rotary screw, reciprocating, and centrifugal compressors. These lubricants are critical for maintaining efficiency, extending equipment lifespan, and ensuring stable operation under high temperature and pressure conditions. From a value chain perspective, upstream includes base oils (mineral oil, synthetic oil such as PAO, ester, PAG), additives (anti-wear, anti-oxidation, anti-foam), and chemical intermediates; midstream involves blending, formulation engineering, performance testing, and packaging; downstream demand comes from manufacturing plants, oil & gas facilities, power generation, construction, and service providers responsible for compressor maintenance. In 2025, the average selling price is approximately US\$3,250 per ton, with global consumption reaching about 1.95 million tons. The industry maintains gross margins of 18%-32%, supported by formulation know-how, brand value, and recurring replacement demand.
