According to our (Global Info Research) latest study, the global Air Conditioner Misting Pre-Cooling market size was valued at US\$ 152 million in 2024 and is forecast to a readjusted size of USD 247 million by 2031 with a CAGR of 7.2% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Air conditioning pre-cooling spray system is a technology that reduces air temperature by introducing high-pressure spray at the air inlet of air conditioning and refrigeration equipment. The system uses the 'flash' effect to lower ambient air temperature by generating tiny water droplets at 1000 PSI pressure, reducing compressor load and operating energy consumption, thereby improving condenser efficiency and extending equipment life. It can significantly reduce energy consumption, reduce the load on air conditioning systems at high temperatures, improve operating efficiency, reduce maintenance costs, and prevent corrosion and sediment accumulation through water treatment devices.
