The global Air Conditioning for New Energy Bus market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

New energy bus air conditioner refers to the air conditioning system equipped with new energy as the power of the bus. Its main function is to adjust the temperature and humidity inside the car through cooling and circulating air supply, so as to maintain a comfortable riding environment. Generally speaking, new energy buses can adopt technologies such as electric power, hydrogen energy and hybrid power, and the corresponding air conditioning systems will also be adjusted accordingly. The most common air-conditioning system in electric buses is the electric compressor air-conditioning system, which generates cooling effect by directly driving the compressor, with low power consumption, high efficiency, and no pollution to the environment.
