# **Abstracts**

Air conditioner filter dryer is a device used in HVAC system, which is a combination of filter and dryer (or dryer). The filter is used to remove any particles that enter the refrigerant flow controller, such as dust, metal or debris. The refrigerant flow control device may be a constant temperature expansion valve or just a capillary tube. Filters are sometimes called filters. It is essential that these particles are filtered out and prevented from entering the metering device. This may block the flow of refrigerant in the expansion valve and cause improper system operation.
